

MS Word High-Yield

Lesson 23 — Shortcuts, Review Tools and Mail Merge

JKSSB Computer Awareness

October 8, 2026

Why These Word Tools Matter

- ▶ Exam items on MS Word repeat a small set of **review and editing tools**.
- ▶ The high-yield set: Find/Replace, spell check, hyperlinks, styles, comments and Track Changes.
- ▶ Also tested: **Page Break vs Section Break**, mail merge, and save/print/PDF export.
- ▶ Most items turn on an **exact shortcut** or a **near-neighbour distinction**.

The one idea

Learn each tool as a shortcut plus the one thing it is *not*.

Find and Replace

- ▶ **Ctrl+F** opens the Find box to locate text in the document.
- ▶ **Ctrl+H** opens **Find and Replace**.
- ▶ Replace can change one match or use **Replace All** for every occurrence.
- ▶ Find also locates formatting, special characters and styles.

Keep the pair straight

Ctrl+F only *finds*; Ctrl+H *finds and replaces*.

Spelling and Grammar

- ▶ **F7** starts the spelling and grammar check.
- ▶ Word flags a misspelling with a red squiggle and grammar issues with other underlines.
- ▶ The **Editor** pane groups Spelling, Grammar and Refinements.
- ▶ “Ignore” skips a word once; “Add to dictionary” accepts it permanently.

Shortcut alert

F7 is spelling and grammar in Word. F5 and F9 belong to PowerPoint slide shows, not Word proofing.

Hyperlinks and Bookmarks

- ▶ **Ctrl+K** inserts a **hyperlink**.
- ▶ A hyperlink can point to a web page, a file, or a place in the same document.
- ▶ A **bookmark** gives a location or selection a name.
- ▶ A hyperlink can jump to a bookmark; a bookmark alone is not visible in print.

Key difference

A **hyperlink** is the clickable link; a **bookmark** is the named target it points to.

Styles

- ▶ A **style** is a named set of formatting: font, size, colour, spacing and indent.
- ▶ Applying a **Heading** style gives the paragraph an outline level.
- ▶ Styles let the **Navigation Pane** and a **Table of Contents** update automatically.
- ▶ Editing a style updates **every** paragraph that uses it.

Definition

A style is reusable formatting stored under a name.

Comments

- ▶ A **comment** is a note attached to a point in the document.
- ▶ Comments **do not change** the document text.
- ▶ Reviewers can reply to a comment and mark it resolved.
- ▶ Comments are metadata and appear in the margin or the Reviewing Pane.

Track Changes

- ▶ **Track Changes** records insertions, deletions and formatting edits.
- ▶ Each change stores the **author's name** and the time — revision metadata.
- ▶ The reviewer can **Accept** or **Reject** each change.
- ▶ Accepting a change keeps it permanently and removes its revision markup.

Trap alert

Accepting a change permanently removes the author's metadata for that change.
(PYQ-12)

Page Break vs Section Break

Point	Page Break	Section Break
What it does	Moves text to a new page	Starts a new section
Formatting	Same section layout	New layout and formatting
Headers/footers	Cannot differ	Can differ per section
Insert	Ctrl+Enter (page break)	Layout → Breaks

Page Break changes the page; Section Break changes the section.

Section Break and Headers/Footers

- ▶ A **Section Break** divides the document into independent **sections**.
- ▶ Each section can have its own **headers and footers**.
- ▶ Each section can also set its own page numbering, margins and orientation.
- ▶ A **Page Break** does not allow different headers or footers.

Trap alert

Only a **Section Break** — never a Page Break — enables different headers and footers in one document. (TRAP-13 / PYQ-13)

Mail Merge: The Idea

- ▶ **Mail Merge** combines a **main document** with a **data source**.
- ▶ Main document: the letter or template, with **merge fields** as placeholders.
- ▶ Data source: a list of records such as names and addresses.
- ▶ Result: one **personalised copy** per record.

Definition

Mail Merge combines a standard letter with a database of addresses. (PYQ-37, PYQ-47)

Mail Merge: Steps

Typical mail-merge steps

1. Create or select the main document (the letter).
2. Select recipients (the data source).
3. Insert merge fields such as name and address.
4. Preview the merged letters.
5. Finish and Merge — print or send by email.

Saving, Printing and PDF Export

- ▶ **Ctrl+S** saves the document, normally as a **DOCX** file.
- ▶ **Ctrl+P** opens the print options.
- ▶ **Save As** can change the file name, location and file format.
- ▶ **Export** or **Save As PDF** creates a **PDF** — Portable Document Format — file.

PDF

Portable Document Format: a **fixed-layout** file that looks the same on every device, good for sharing and printing.

Shortcut Near-Neighbours

Action	Shortcut
Find	Ctrl+F
Find and Replace	Ctrl+H
Spelling and grammar	F7
Insert a hyperlink	Ctrl+K
Save	Ctrl+S
Print	Ctrl+P
Remove document-window split	Alt+Shift+C

Trap Alert: Word Facts to Keep Straight

- ▶ A **Section Break**, not a Page Break, enables different headers/footers. (TRAP-13)
- ▶ **Track Changes** records revision metadata; accepting a change removes that change's metadata. (PYQ-12)
- ▶ A **bookmark** is a named target; a **hyperlink** (Ctrl+K) is the clickable link.
- ▶ **F7** is spelling/grammar; F5 and F9 are PowerPoint slide-show keys. (TRAP-32)
- ▶ **Mail Merge** combines a letter with an address database. (TRAP-29)

Lesson 23: Recall

- ▶ Find: **Ctrl+F**; Find and Replace: **Ctrl+H**; Replace All changes every match.
- ▶ Spell check: **F7**; hyperlink: **Ctrl+K**; save: Ctrl+S; print: Ctrl+P.
- ▶ **Styles** are named formatting; Heading styles drive the Navigation Pane and a Table of Contents.
- ▶ **Comments** do not change text; **Track Changes** records edits with author metadata.
- ▶ **Section Break** — not Page Break — enables different headers/footers.
- ▶ **Mail Merge** combines a standard letter with an address database; **Save As PDF** exports a fixed-layout file.
