

high addresses

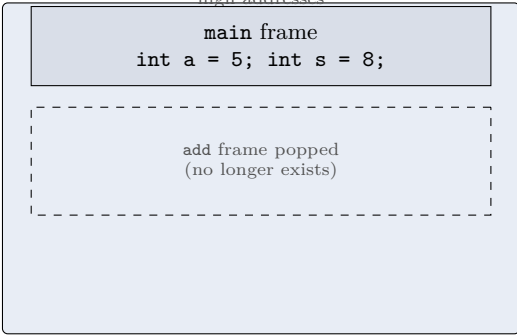

main frame

```
int a = 5; int s = 8;
```

add frame popped  
(no longer exists)

low addresses

stack grows down

The diagram illustrates a stack frame in memory. It consists of a large light blue rectangle representing the stack. At the top, a smaller solid light blue rectangle is labeled 'main frame' and contains the code 'int a = 5; int s = 8;'. Below this, a larger dashed rectangle is labeled 'add frame popped (no longer exists)'. To the right of the stack, a blue arrow points downwards, labeled 'stack grows down'. The top of the stack is labeled 'high addresses' and the bottom is labeled 'low addresses'.
